PROFESSIONAL SUMMARY

Computer Science undergraduate (B.Tech, expected May 2027) who designs, builds, and deploys full-stack applications in Java, Python, TypeScript, and SQL. Hands-on with REST API development in FastAPI and Next.js, database design in PostgreSQL and SQLite, automated end-to-end testing, cloud deployment on Google Cloud, Firebase, and Vercel, and AI integrations using Google Vertex AI (Gemini). Strong DSA foundation with 300+ problems solved in Java.

EDUCATION

B.Tech, Computer Science and Engineering
VIT Bhopal University, India | CGPA: 8.56 / 10

Sep 2023 – May 2027 (Expected)

Sachdeva Millennius School, India | Class XII (CBSE): 92.8% | Class X (CBSE): 90.5%

2019 – 2022

PROJECTS

VoxAide AI — Voice-Enabled Customer Service Assistant | *Personal Project*

voxaide.web.app

React, TypeScript, Python, Firebase Authentication, Firestore, Google Vertex AI (Gemini), Google Cloud Text-to-Speech, Twilio

- Engineered a voice assistant that answers customer phone calls in real time — a React and TypeScript frontend with a Python backend orchestrating the speech-to-text, AI response, and text-to-speech steps of each call.
- Integrated the Python backend with Google Vertex AI (Gemini) and Google Cloud Text-to-Speech over REST APIs, converting caller speech to text, generating a reply, and returning synthesized audio.
- Connected Twilio to receive live calls and pass audio to the backend, and implemented Firebase Authentication with Firestore for user login and conversation history.
- Deployed the frontend on Firebase Hosting and the backend on Render as separate services, so either side ships without redeploying the other.

EchoGrow — AI-Powered Business Growth Platform | *Personal Project*

echogrow-three.vercel.app

Next.js, TypeScript, PostgreSQL, Prisma ORM, Google Gemini API, Tailwind CSS, Vercel

- Built a 10-route Next.js and TypeScript app with 13 reusable React components, an admin login secured by an HMAC-signed httpOnly session cookie, and a lead-management dashboard.
- Designed a 3-table PostgreSQL schema (leads, subscribers, campaigns) with Prisma ORM and built the backend as typed server actions and an API route, with form validation on every submission.
- Developed the campaign-generation endpoint on the Gemini API with a strict JSON response schema and an automatic fallback model, returning structured storyboards to the UI.
- Wrote 30 automated end-to-end tests covering navigation, form validation, and submission flows; deployed on Vercel.

Tradexa (BackTest Tracker) — Trading Journal | *Personal Project* | *In Progress*

[GitHub](#)

Chrome Extension (JavaScript), Python FastAPI, SQLite, Electron + React, Next.js, EasyOCR

- Building a four-component system — Chrome extension, FastAPI backend, Electron dashboard, and Next.js web app — that turns TradingView trades into performance analytics.
- Wrote a Manifest V3 Chrome extension that reads five values off a TradingView chart (entry, take-profit, stop-loss, direction, symbol) on an ALT+X hotkey with layered DOM/URL fallbacks, then posts them to the backend.
- Built a FastAPI backend exposing 16 REST endpoints over a SQLite trade store, with an EasyOCR/OpenCV screenshot fallback when values cannot be read from the page and a background cloud-sync worker.
- Building an Electron and React dashboard that computes win rate, profit factor, and average R per trade with per-setup and monthly breakdowns.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Backend & APIs: REST APIs, FastAPI, Next.js API Routes & Server Actions, Prisma ORM

Frontend: React.js, Next.js, Electron, Tailwind CSS

Databases: PostgreSQL, MySQL, SQLite, Firebase Firestore

Cloud & Deployment: Google Cloud, Firebase (Auth, Firestore, Hosting), Vercel, Render

AI & Integrations: Google Vertex AI (Gemini), Gemini API, Google Cloud Text-to-Speech, Twilio APIs

Testing & Tools: Automated end-to-end testing, Git, GitHub, VS Code

CERTIFICATIONS

- Advanced RAG with Vector Databases and Retrievers — Coursera
- Build Multimodal Generative AI Applications — Coursera
- Develop Generative AI Applications: Get Started — Coursera

ACHIEVEMENTS

- Solved 300+ algorithmic problems in Java across LeetCode, CodeChef, HackerRank, InterviewBit, and SPOJ.
- Selected for the Ericsson Edge Academia Program among the top 700 candidates worldwide.
